This will not be included in the project.

it's important to clarify what will not be included in the project scope to avoid any misunderstandings. Here are some aspects that will not be part of the project:

1. **Backend Development:** While the project may include the implementation of the backend as a plus, the primary focus is on creating the front-end of the website using HTML, CSS, and Javascript. The backend functionality is not a core requirement but can be considered as an enhancement.

2. **Content Management Systems (CMS):** The project explicitly states that the website should not be built using CMS platforms like WordPress or Webflow. The website should be coded from scratch or generated using tools like Figma, with the final implementation in HTML, CSS, and Javascript.

3. **Advanced Web Publication Aspects:** While the focus is on creating an engaging website, aspects such as web analytics, SEO, or interoperability are not part of the project scope. The primary goal is to design, develop, and launch the website within the given constraints.

4. **Hosting and Maintenance:** Although the website will be hosted and published for the purpose of the course, ongoing hosting and maintenance post-launch are not within the scope of this project. The focus is on the development and delivery of the website within the specified timeline.
